

Contents

	Scope of the thesis	9
Chapter 1	Fatty acid supply and status of piglets from birth to two weeks post weaning (Livest. Prod. Sci., in press)	15
Chapter 2	Effect of increasing intakes of α -linolenic acid on growth performance, essential fatty acid status and plasma lipids in weanling piglets (Livest. Prod. Sc., in press)	31
Chapter 3	Influence of dietary n-3 polyunsaturated fatty acids, in the form of either linseed or fish oil, on growth performance, small intestinal morphology and essential fatty acid status of weanling piglets (submitted)	47
Chapter 4	Growth performance of weanling piglets fed diets with different contents of fish oil (submitted)	63
Chapter 5	The effect of fish oil in the diet on clinical response in weanling piglets challenged with a pathogenic <i>Escherichia coli</i> (submitted)	73
Chapter 6	Essential-fatty acid status of piglets at weaning in relation to post-weaning health: a brief review (submitted)	85
Chapter 7	High water content of feed raises dry matter intake by weanling piglets (Livest. Prod. Sc., in press)	95

General conclusions	107
Summary	113
Samenvatting	119
Curriculum Vitae	125
