

Contents

1	Introduction	3
1.1	Context and scope	3
1.2	Three problems	5
1.3	Independence, Poisson processes and Boolean models	8
1.4	Semi-parametrics	9
1.4.1	Nonparametric maximum likelihood estimation	10
1.4.2	Consistency of the (NP)MLE	12
1.4.3	Score equations	16
1.4.4	Missing data problems and the EM algorithm	19
1.5	Perfect Simulation	22
1.5.1	Coupling From The Past	23
1.5.2	Stochastic EM	25
1.5.3	Perfect Stochastic EM	26
2	Laslett's line segments	31
2.1	Introduction	31
2.1.1	Inference for ergodic point processes	32
2.1.2	Laslett's line segment problem	37
2.1.3	Some history	38
2.1.4	Scope of our contribution	39
2.2	A re-parameterization	39
2.3	Poisson	44
2.4	EM	51
2.5	Without the Poisson assumption	57
2.5.1	Expanding domain asymptotics	58
2.5.2	Some extra censoring	60
2.5.3	ergodic lemmas	61
2.6	An estimator for the line segments	67

3	Chord Length Estimation	71
3.1	Introduction	71
3.2	The chord length distribution	73
3.3	Digression: A related problem	76
3.4	Back to the chord lengths	80
3.5	A simulation	80
3.6	The linear contact distribution	82
4	The Bombing Model	87
4.1	Introduction	87
4.2	The conditional Boolean model	89
4.3	Coupling from the past for the conditional Boolean model	92
4.4	Maximum likelihood	100
	4.4.1 MCMC approach	100
	4.4.2 EM	101
4.5	An example	103
4.6	Sampling from general point processes	106
	4.6.1 spatial birth-and-death processes	108
	4.6.2 the anti-hereditary case	109
	4.6.3 the hereditary case	112
	References	115
	Acknowledgements	121
	Samenvatting	123
	Curriculum Vitæ	127
