|--|------------|
| Summary | i |
| Contents | iii |
| List of Figures | vi |
| Glossary of Notations | ix |
| 1 Introduction and Preliminaries | 1 |
| 1.1 Motivation | 1 |
| 1.2 The main contribution of this thesis | 5 |
| 1.3 Publication details | 8 |
| 2 A Brief Introduction to Lévy Processes | 9 |
| 2.1 Introduction | 9 |
| 2.2 The Wiener-Hopf factorization | 11 |
| 2.3 Some important classes of Lévy processes | 13 |
| 2.3.1 Lévy processes with no positive jumps | 13 |
| 2.3.2 Lévy processes with mixed exponential jumps | 15 |
| 2.3.3 Lévy processes with jumps of phase-type | 16 |
| 3 A Change of Variable Formula with Local Time-Space for Bounded Variation Lévy Processes with Application to Solving the American Put Option Problem | 19 |
| 3.1 Lévy processes of bounded variation and local time-space | 19 |
| 3.2 A generalization of the change of variable formula | 22 |
| 3.3 Proofs and main calculations | 23 |
| 3.4 Application to solving the American put option problem | 26 |
| 3.4.1 Proof and main calculations of Theorem 3.4.1 | 28 |
| 3.4.2 Proof and main calculations of Theorem 3.4.2 | 31 |
| 3.5 Concluding remarks | 32 |

| | | |
|----------|--|-----------|
| 4 | On the Novikov-Shiryaev Optimal Stopping Problems in Continuous Time | 33 |
| 4.1 | Introduction | 33 |
| 4.2 | Main results | 34 |
| 4.3 | Preliminary lemmas | 36 |
| 4.4 | Proofs of theorems | 40 |
| 4.5 | Numerical examples | 42 |
| 4.6 | Concluding remarks | 46 |
| 5 | An Approach for Solving Perpetual Optimal Stopping Problems Driven by Lévy Processes | 47 |
| 5.1 | Introduction and problem formulation | 47 |
| 5.2 | Preliminary results | 50 |
| 5.2.1 | An averaging problem | 50 |
| 5.2.2 | Fluctuation identity for first passage of Lévy processes | 52 |
| 5.3 | General results on optimal stopping problems | 54 |
| 5.3.1 | American put-type optimal stopping problems | 54 |
| 5.3.2 | American call-type optimal stopping problems | 56 |
| 5.4 | The continuous and smooth pasting principles | 56 |
| 5.5 | Consistency with existing literature | 59 |
| 5.6 | Proofs and main calculations | 62 |
| 5.7 | Numerical examples: the arbitrage-free pricing of American options under tempered stable processes with downward jumps | 69 |
| 5.7.1 | Tempered stable processes with downward jumps | 69 |
| 5.7.2 | The rational price of perpetual American options | 71 |
| 5.7.2.1 | Perpetual American put option | 71 |
| 5.7.2.2 | Perpetual American call option | 73 |
| 5.7.3 | Numerical results | 74 |
| 5.8 | Connection to the finite maturity American put option problem | 78 |
| 5.9 | Conclusion and remarks | 81 |
| 6 | Principles of Smooth and Continuous Fit in the Determination of Endogenous Bankruptcy Levels | 83 |
| 6.1 | Introduction | 83 |
| 6.2 | The capital structure of the firm | 85 |
| 6.3 | Lévy processes with no positive jumps | 87 |
| 6.4 | Scale functions and fluctuation identities | 89 |
| 6.4.1 | Scale functions | 89 |
| 6.4.2 | Fluctuation identities | 94 |
| 6.5 | Determining the bankruptcy level | 96 |
| 6.6 | The term structure of credit spreads | 100 |
| 6.6.1 | Non-zero credit spreads for very short maturity bonds | 101 |

| | | |
|----------|---|------------|
| 6.7 | Numerical inversion of double Laplace transform | 103 |
| 6.8 | Numerical examples | 104 |
| 6.9 | Conclusion and remarks | 110 |
| 7 | Evaluating Scale Functions of Spectrally Negative Lévy Processes | 111 |
| 7.1 | Introduction | 111 |
| 7.2 | Spectrally negative Lévy processes | 112 |
| 7.3 | Scale functions | 113 |
| 7.4 | Evaluating scale functions | 115 |
| 7.4.1 | A method based on Rogers' approach | 115 |
| 7.4.2 | A method based on Abate and Whitt and Choudhury et al | 117 |
| 7.5 | Numerical examples | 119 |
| 7.6 | MATLAB program code | 124 |
| | Bibliography | 127 |
| | Samenvatting | 135 |
| | Acknowledgements | 139 |
| | Curriculum Vitae | 141 |
