

# List of Figures

4.1	The first five Appell polynomials $Q_n(x)$ , $n = 1, 2, \dots, 5$ , generated by upward jumps compound Poisson process having drift $d = -0.1$ . . . . .	35
4.2	The shape of the value function of an optimal stopping problem with payoff function $G(x) = (x^+)^4$ driven by downward jumps compound Poisson process with drift $d = 0.1$ . . . . .	43
4.3	The shape of a candidate solution $V_y(x)$ for different values of boundary $y$ of an optimal stopping problem with payoff function $G(x) = (x^+)^4$ driven by downward jumps compound Poisson process with drift $d = 0.1$ . . . . .	43
4.4	The shape of the value function of an optimal stopping problem with payoff function $G(x) = (x^+)^4$ driven by upward jumps compound Poisson process with drift $d = -0.1$ . . . . .	44
4.5	The shape of a candidate solution $V_y(x)$ for different values of boundary $y$ of an optimal stopping problem with payoff function $G(x) = (x^+)^4$ driven by upward jumps compound Poisson process with drift $d = -0.1$ . . . . .	44
5.1	The shape of the scale function $W^{(q)}(x)$ for tempered stable processes. . . . .	71
5.2	The shape of $\frac{dW^{(q)}}{dx}(x)$ for tempered stable processes. . . . .	71
5.3	The shape of the rational price of the American put option. . . . .	75
5.4	The shape of the rational price of the American call option. . . . .	75
5.5	The shape of a candidate solution $V_y(x)$ for different values of boundary $y$ of the American put option problem. . . . .	76
5.6	The shape of a candidate solution $V_y(x)$ for different values of boundary $y$ of the American call option problem. . . . .	76
5.7	The shape of a candidate solution $V_y(x)$ of the American put option problem at $x = y$ for $y \neq x^*$ . . . . .	77
5.8	The shape of a candidate solution $V_y(x)$ of the American call option problem at $x = y$ for $y \neq x^*$ . . . . .	77
6.1	The shapes of $W^{(q)}(x)$ for unbounded variation Lévy processes. . . . .	92
6.2	The shapes of $W^{(q)}(x)$ for bounded variation Lévy processes. . . . .	92
6.3	The shapes of $\frac{d}{dx}W^{(q)}(x)$ for unbounded variation Lévy processes . . . . .	93

6.4	The shapes of $\frac{d}{dx}W^{(q)}(x)$ for bounded variation Lévy processes. . . . .	93
6.5	Various shapes of the equity curves $V \mapsto E(V; V_B)$ for different values of bankruptcy level $V_B$ for unbounded variation Lévy processes. . . . .	106
6.6	Various shapes of the equity curves $V \mapsto E(V; V_B)$ for different values of bankruptcy level $V_B$ for bounded variation Lévy processes. . . . .	106
6.7	The shape of the equity curves $V_B \mapsto E(V; V_B)$ for a fixed value $V$ of the firm's asset for unbounded variation Lévy processes. . . . .	107
6.8	The shape of the equity curves $V_B \mapsto E(V; V_B)$ for a fixed value $V$ of the firm's asset for bounded variation Lévy processes. . . . .	107
6.9	The shape of the credit spreads of a firm with debt maturity profile $m = 10$ for the case where $X$ is a pure Brownian motion. . . . .	108
6.10	The shape of the credit spreads of a firm with debt maturity profile $m = 10$ for the case where $X$ is $\alpha$ - stable process with index $\alpha = 1.75$ . . . . .	108
6.11	Credit spreads as a function of maturity, for different values of leverage, running from 5% to 75% for a pure Brownian motion. . . . .	109
6.12	Credit spreads as a function of maturity, for different values of leverage, running from 5% to 75% for $\alpha$ - stable process with index $\alpha = 1.75$ . . . . .	109
7.1	The shape of the scale function $W_{\Phi(q)}(x)$ of compound Poisson and jump diffusion processes. . . . .	120
7.2	The absolute error $ \widehat{W}_{\Phi(q)}(x) - W_{\Phi(q)}(x) $ for the scale function $W_{\Phi(q)}(x)$ of compound Poisson and jump diffusion processes. . . . .	120
7.3	The shape of the scale function $W_{\Phi(q)}(x)$ of $\alpha$ - stable Lévy processes with indexes $\alpha = 2$ and $\alpha = 1.75$ . . . . .	121
7.4	The absolute error $ \widehat{W}_{\Phi(q)}(x) - W_{\Phi(q)}(x) $ for the scale function $W_{\Phi(q)}(x)$ of $\alpha$ - stable Lévy processes with indexes $\alpha = 2$ and $\alpha = 1.75$ . . . . .	121
7.5	The shape of the scale function $W_{\Phi(q)}(x)$ of tempered stable Lévy processes with indexes $\alpha = 0.5$ and $\alpha = 1.5$ . . . . .	122
7.6	The shape of the scale function $W_{\Phi(q)}(x)$ of gamma process perturbed by diffusion process. . . . .	122
