

Acknowledgement

I take this opportunity to express my sincere gratitude to the teachers, colleagues, and friends. Without them, the results presented in this thesis could not have been accomplished.

My PhD study in Utrecht University was started through the contact with Prof. Ben Colenbrander, my promotor. Therefore, I would like to thank you Ben for accepting me to complete my study in your department and for continuous encouragement and confidence.

I also wish to express my gratitude to my promotor Prof Marc-Andre Sirard, the head of the center of biology of reproduction, department of animal sciences, University Laval, Quebec, Canada. My visit and stay at the Genomic lab in your department was particularly important not only in learning several advanced molecular biology techniques but in greatly widening my perspectives concerning oocyte maturation. Thanks also for the constructively reviewing the manuscript. I'm also very thankful to your family for the hospitality at your home during my stay in Quebec City.

I'm indebted to my co-promotor Dr. Steph Dieleman, the initiative of the project in this thesis and the center point for all contacts within and outside the university. Without his encouragement and constant guidance I could not have finished this thesis within a tight time (start at September 2003). I am grateful for patient teaching especially about steroid hormones metabolism and structure. Thank you also for the correction and advice on English writing throughout my PhD study and for translating the *Samenvatting* of this thesis

Considering his inputs into this thesis, Dr. Peter Vos deserved to be my co-promotor, not only in the direct supervision during the processes of animal treatments, skillful OPU and ultrasonography, writing correction but also to solve administrative issues. I am deeply indebted for all your help.

Dr. Mart Bevers, talking of Mart brings up the one very tragic part of my PhD study period. The death of Mart (my previous co-promotor) who passed away after a period of suffering of lung cancer one and half year after the start of my PhD study, have shock us. He showed me the basic of how to design and perform experiments and to interpret and discuss the results. Above all, Mart was a wonderful human being who is much beloved and deeply missed by all that knew him, especially me. It is extremely hard to convey my gratitude to him in words. I feel most appropriate to dedicate this thesis to him

The input of my colleagues at the biochemistry and cell biology labs at the department of Herd Health and reproduction has been very valuable. Dr. Bernard Roelen, the head of cell biology lab, a very enthusiastic and potent researcher. Although you are often very busy with official and scientific duty, your door was always open to discuss and advice especially primer design problems. With no doubt, your kind contributions must be recognized. As a veterinarian with humble lab experience, daily professional lab supervision by the cell biology lab team (Elley, Leni, Eric, Ineke, Peter, Ahrend) was indispensable, Elley, I am very thankful for being extremely helpful and kind during my day to day work, Eric, many thanks for, teaching me all about porcine IVP, help with statistical analysis and daily questions about mathematical conversion !. A special word of thanks goes to Leni who spared a lot of time out of her busy duties to help me especially with the experiments we performed to characterize the factors associated with developmental competence in follicular fluid. Although that work has not been included in this thesis but I have learned so much from that experiment. Thank you also for the critical tips during sample collection, PCR and a lot more....Many thanks also for your hospitality during the nice barbeques at your home. I am very thankful to Ineke and Riek for all the kindness. I wish also to sincerely thank Peter for the continuous technical support and taking care of the daily order at the lab which have been very significant in helping us progress in the experiment. My special thanks to Ahrend, in few words, a man hardly ever to be found nowadays from all aspects.

At the other side, in the biochemistry lab, Thea and Christiene who have worked very hard for my research deserve a lot of thanks not only because of the day and night accurate hormonal measurement but also in the arrangement of several things in the lab that could make my QPCR work run smoothly. Thea, we miss you a lot in the lab in the last few months of my study, we miss the laugh of Christine, and Mars ! as well after your retirement. Thank you also for the hospitality at your home. To both I wish to express my gratitude. I am also very thankful to Dr. Hiemka Knijn for being always

ready to help during my research. She helped us during the sample collection with surgery and also during OPU collection of golden oocytes. I am also thankful to Prof. Bert van der Weijden, Prof Marcel Taverne, Dr. Bart Gadella, Dr. Theo van Heaften, Dr. Fariborz Izadyar, Dr. Rob van der Hurk for always being very kind, and to Dr. Tom Stout for editing the English of the first chapter.

I am thankful to the former as well as the current PhD students. My officemates, Jordi for always prepared to advice and help. Annadie, a constant source of valuable support during my first days in the lab. Karianne, for help not only with the translation but also with the Dutch bureaucracy problems. Thanks to Pachi for teaching bovine IVF, and for continuous encouragement. To Patricia for the help with protein measurement and fruitful discussion about antioxidant and embryo development. Anna Rita, Nader, Edita and Jose for the kindness. To the current PhD student, Ewert, a well organized student for the scientific discussion about QPCR and stem cells. Jurriaan and Mohamad for the scientific discussion and also for showing interest in our work. To my Taiwanese colleagues Huang (Michael), Jason and so kind Brazilian Regiane for their friendship.

I would like also to acknowledge the valuable activities of several people who spent a lot of time and effort in my experiment. Hans Lutz and his team, Freek, Nico, Sikko, Bart, Staas, Paulco and Teus for taking care of the cows and for collecting blood samples and for always being helpful. To Frans van Kooi and his team (HALCO), Henk, Nouredin, Jamal, Hans, Willy, and many others, for the preparation and helping in the surgery, sterilization and providing the logistic whenever needed. Special thanks to several students for round-the-clock assistance with managing the experiments among them, Hijbert Groenendaal, Sander van Gastel and Elsa van Reenen.

I am deeply grateful to my all Thai generous friends, first, to Theerawat Tharasanit, who throughout my experiments did not hesitate to give hand when needed, I'm also grateful to your help in the learning the skill of confocal microscopy and different staining techniques.

To Chatchote, very kind and highly respected friend ready to help at any time. To Pichi, thank you so much for help with the statistics, your help saved a lot of time, no need to wait for a month to get appointment with a statistician, your door was always open even in the weekend. To Niyada and Chewing for the kindness. Thanks also to my Iranian friends, Hadi, Hassan, Mahdi, Ismail and Sahram and also to Tareq Helsa from Jordan for being always ready to help.

I am indebted to all the staff member of the genomic lab at the center of biology of reproduction, department of animal sciences, University Laval, Quebec, Canada, especially Dr. Isabelle Dufort for the guidance and help not only during the experiment but also later on by email, to Marie-Jean and Marian for the help and assistance during the experiment and for being so kind.

A special thanks to Annemarie Waijer, very kind and excellent student from Wageningen University who has become a close friend in the last year of my study, for efficient help during the experiment and, also for translating many letters.

في هذه المساحة اود ان اعبر عن خالص الشكر والامتنان لكل من ساهم بشكل او بأخر في اظهار هذه الأطروحة بالشكل المطلوب, وأخص بالذكر, الأستاذ/ محمدعبدالنور الفالح المستشار الثقافي بالمكتب الشعبي الليبي الذي اثبت وبشهادة الجميع ان متابعة الطلبة فن يتطلب مهارة خاصة, فبأسمى و بأسم الطلبة الليبيين الدارسين بهولندا اثناء فترة قيامه بمهامه نتقدم له بأسمى عبارات الشكر و التقدير. شكر خاص ايضا للدكتور سليمان الغريب على المتابعة و الأتصال الدائم.

شكر خاص ايضا للأخوة يوسف المدني وأسرتة, محمد غمبيض واحمد مسعود على كرمهم واتصالهم الدائم. الأستضافة الكريمة لي من الدكتور وجدي المشري اثناء زيارتي لكندا ليست بالأمر المستغرب, فله مني كل الشكر و التقدير. للأخوة معمر ابوغرارة, عمران ابوعبود, عمران عبدالسلام, عبدالمجيد الخبولي, عزالدين علي فرج و محمد ابراهيم تقدير خاص للتواصل الدائم.

For All, Thank you
