

CONTENTS

1. INTRODUCTION 9
 - 1.1 Energy and sustainable development 9
 - 1.2 The energy system and its relation to climate change 13
 - 1.3 Knowledge on the future 18
 - 1.4 Energy models 23
 - 1.5 Aim and outline of the thesis 27

2. TIMER MODEL DESCRIPTION 31
 - 2.1 Introduction 31
 - 2.2 Model Outline and Structure 32
 - 2.3 Common Model Elements 52
 - 2.4 Using TIMER in Conjunction with FAIR and IMAGE for Mitigation Analysis 57
 - 2.5 Concluding Remarks 59

3. THE CONSISTENCY OF THE IPCC SRES SCENARIOS CONSISTENT WITH RECENT LITERATURE AND RECENT PROJECTIONS 61
 - 3.1 Introduction 61
 - 3.2 Methodology 63
 - 3.3 Results for Main Driving Forces 68
 - 3.4 Results for Emission Projections 82
 - 3.5 Discussion and Conclusions 90

4. IPCC SRES-BASED ENERGY AND EMISSION SCENARIOS FOR CHINA IN THE 21ST CENTURY 95
 - 4.1 Introduction 95
 - 4.2 Process and methodology 96
 - 4.3 Baseline scenarios for China 98
 - 4.4 Mitigation scenarios for China 107
 - 4.5 Results for policy scenarios 109
 - 4.6 Conclusions and suggestions 116

5. UNCERTAINTY RANGES FOR THE IPCC SRES SCENARIOS: PROBABILISTIC ESTIMATES CONDITIONAL TO THE STORYLINE 123
 - 5.1 Introduction 123
 - 5.2 Methods 125
 - 5.3 Results 135
 - 5.4 Discussion and comparison to other approaches 143
 - 5.5 Conclusions 149

6. MULTI-GAS SCENARIOS TO STABILIZE RADIATIVE FORCING 159
 - 6.1 Introduction 159
 - 6.2 Methodological questions in multi-gas analysis 160
 - 6.3 Development of emissions without climate policies 164
 - 6.4 Stabilizing radiative forcing at 4.5 W/m²: multi-gas versus CO₂-only 168
 - 6.5 Discussion on the metrics of multi-gas scenarios 172
 - 6.6 Conclusions and the way forward 178

-
7. STABILIZING GREENHOUSE GAS CONCENTRATIONS AT LOW LEVELS:
AN ASSESSMENT OF REDUCTION STRATEGIES AND COSTS 181
 - 7.1 Introduction 181
 - 7.2 Earlier work on stabilization scenarios 184
 - 7.3 Methodology 187
 - 7.4 Stabilizing GHG concentration at 650, 550, 450 ppm:
central scenarios 195
 - 7.5 Benefits and co-benefits 204
 - 7.6 Uncertainties in stabilizing emissions 209
 - 7.7 Discussion 215
 - 7.8 Conclusions 218

 8. RESPONSES TO TECHNOLOGY AND TAXES IN A SIMULATED WORLD 223
 - 8.1 Introduction 223
 - 8.2 Theoretical background and methodology 225
 - 8.3 Baseline scenario 231
 - 8.4 Mitigation experiments 232
 - 8.5 Discussion and main conclusions 242

 9. EXPLORING THE ANCILLARY BENEFITS OF THE KYOTO PROTOCOL FOR AIR
POLLUTION IN EUROPE 245
 - 9.1 Introduction 245
 - 9.2 Methodology 247
 - 9.3 The baseline scenario for carbon dioxide emissions and air pollution
in Europe for 2010 252
 - 9.4 Kyoto scenarios and ancillary benefits for regional air
pollution 259
 - 9.5 Discussion 264
 - 9.6 Conclusions 266

 10. SUMMARY AND DISCUSSION 273
 - 10.1 Long-term energy projections: both necessary and difficult 273
 - 10.2 Long-term projection of baseline emissions and the role
of uncertainties 274
 - 10.3 Ambitious mitigation scenarios 279
 - 10.4 Discussion and the steps ahead 284
