

Contents

Chapter 1	General Introduction	9
Chapter 2	Dissemination of lipid A deacylases (PagL) among Gram-negative bacteria: identification of active-site histidine and serine residues	55
Chapter 3	Crystal structure and catalytic mechanism of the LPS-3-O-deacylase PagL from <i>Pseudomonas aeruginosa</i>	83
Chapter 4	Expression of the lipopolysaccharide-modifying enzymes PagP and PagL modulates the endotoxic activity of <i>Bordetella pertussis</i>	109
Chapter 5	Consequences of the expression of lipopolysaccharide-modifying enzymes for the efficacy and reactogenicity of whole-cell pertussis vaccines	139
Chapter 6	Supplementation of whole-cell pertussis vaccines with lipopolysaccharide analogs: a novel strategy for modulating vaccine efficacy and reactogenicity	157
Chapter 7	Lipopolysaccharide analogs improve efficacy of acellular pertussis vaccines and reduce type-I hypersensitivity	177
Chapter 8	Identification and functional characterisation of <i>Bordetella pertussis</i> <i>lpxL</i> homologues	195
Chapter 9	Gene cluster involved in lipopolysaccharide-core biosynthesis and identification of a novel lipid A modification in <i>Bordetella pertussis</i>	221
Chapter 10	General and Summarising Discussion	247
Appendices		
	Nederlandse Samenvatting	269
	Dankwoord	279
	Curriculum vitae	285
	List of Publications and Patents	289
	Colour figures	293
