Introduction	8
Background	8
Content and results	10
Preliminaries	12
0.1. Category theory	12
0.2. A formalism of trees	14
Chapter 1. Operads	19
1.1. Operads, functors, and natural transformations	19
1.2. Free operads and operads given by generators and relations	29
1.3. Limits and colimits in the category of operads	31
1.4. Yoneda's lemma	33
1.5. Closed monoidal structure on the category of operads	35
1.6. Quillen model structure on the category of operads	38
1.7. Grothendieck construction for operads	43
1.8. Enriched operads	46
1.9. Comparison with the usual terminology	47
Chapter 2. Dendroidal sets	49
2.1. Motivation - simplicial sets and nerves of categories	49
2.2. An operadic definition of the dendroidal category	50
2.3. An algebraic definition of the dendroidal category	54
2.4. Dendroidal sets - basic definitions	63
2.5. Closed monoidal structure on the category of dendroidal sets	68
2.6. Skeletal filtration	73
Chapter 3. Operads and dendroidal sets	75
3.1. Nerves of operads	75
3.2. Inner Kan complexes	79
3.3. Anodyne extensions	82
3.4. Grafting in an inner Kan complex	83
3.5. Homotopy in an inner Kan complex	86
3.6. The exponential property	96
3.7. Inner Kan complex generated by a dendroidal set	99
Chapter 4. Enriched operads and dendroidal sets	101
4.1. Case study: $A_\infty$ -spaces	101
4.2. The Boardman-Vogt $W$ -construction	103
4.3. The homotopy coherent nerve	108
4.4. Algebras and the Grothendieck construction	112

4.5. Categories enriched in a dendroidal set	115
4.6. Weak $n$ -categories	116
4.7. Quillen model structure on $dSet$	122
Bibliography	125
Index	127
Samenvatting	129
Acknowledgements	131
Curriculum vitae	132
