

INTRODUCTION TO CLINICAL NEURO-
SCIENCE

by JOHN WALTON

Baillière Tindall, London, 1983.

pp. 246, Figs and Tables. £ 8.75.

ISBN 0 7020 1026 X.

This book provides for the medical students and for the practising clinician, who already has some understanding of neurobiology, a clear commentary upon nervous structure and function, and upon ways in which dysfunction is made apparent through clinical signs and symptoms.

This book gives more integration with the basic teaching of neurophysiology. It gives an overall view. A source of investigation is very clearly given.

I am sure that this outstanding, very readable, well illustrated book can be highly recommended.

J.J. Jansen, Utrecht
