

# Cisco Connected Justice Connects Law Enforcement, Courts, and Corrections

Cisco® Connected Justice provides a unified network platform to automate the justice workflow, remove the barriers between systems, and facilitate the transfer of information.

## **Connected Justice: Law Enforcement**

Integrating remote video and real-time collaboration at all levels of law enforcement allows agencies to control evidence, speed response times and control costs.

## **Connected Justice: Courts**

Streamline court processes by improving collaboration with face-to-face collaboration. This reduces the need to move inmates or bring in live interpreters, increases safety and security, plus cuts the time and cost of travel with adjudication, testimony and interpretation.

## **Connected Justice: Corrections**

Using Cisco collaboration technology to provide more efficient services to inmate populations enables correctional institutions to improve staff and prisoner safety, improve inmate management and control contraband, and reduce transportation and other costs.

## **Judge for Yourself**
