Abstract

ClinicalLINKS is a project being undertaken in Darling Downs South West Queensland using Map of Medicine.

The project creates visual procedural diagrams of referral processes for specific medical conditions within localised geographical regions.

The purpose is to enable front line clinicians and other key stakeholders the ability to tackle chronic conditions by:

- Providing a instant access to comprehensive, evidence-based local guidance;
- Providing clinical decision support at the point of care;
- Enhancing partnerships and collaboration across services;
- Enhancing accuracy of referrals; and
- Improving patient outcomes through seamless care across primary and secondary care.
