Correction to Meeus et al. (2011)

In the article “Personality Types in Adolescence: Change and Stability and Links With Adjustment and Relationships: A Five-Wave Longitudinal Study,” by Wim Meeus, Rens Van de Schoot, Theo Klimstra, and Susan Branje (*Developmental Psychology*, 2011, Vol. 47, No. 4, pp.1181–1195. doi: 10.1037/a0023816), the BFs (Bayes factors) as reported for H1.1 in Table 2 should have been $BF_{2,1} = 5979.90$ and $BF_{2,unc} = 5.97$. The PMP (posterior model probability) values of M1, M2, and M3 remain exactly the same as in the published paper: $< .001$, $.99$ and $< .001$, respectively. The conclusions from the analysis do not change because of the corrected results.
