Editorial

Editorial to European workshop on particulate systems in nanomedicine (2014)

The recent European Workshop on Particulate Systems in Nanomedicine (EWPS) held on March 13–14, 2014, at the Department of Pharmaceutics, Utrecht University, was on the 11th in a long series of biannual meetings, initiated in 1997, bringing together researchers from pharmaceutical/nanomedicine groups across Europe (from Berlin, Copenhagen, Geneva, Manchester, Paris, and Utrecht). The aim of these EWPS meetings is to promote scientific exchange and foster interaction between European academics with major interests in particulate drug delivery systems.

This special issue contains papers arising from the lectures and posters presented during the Utrecht meeting. We are grateful to Professor A.T. Florence and Elsevier for continuing the

long-standing tradition to value this meeting series with such special issues.
