## OPEN **Erratum:** Effects of Testosterone Administration on Strategic Gambling in Poker Play

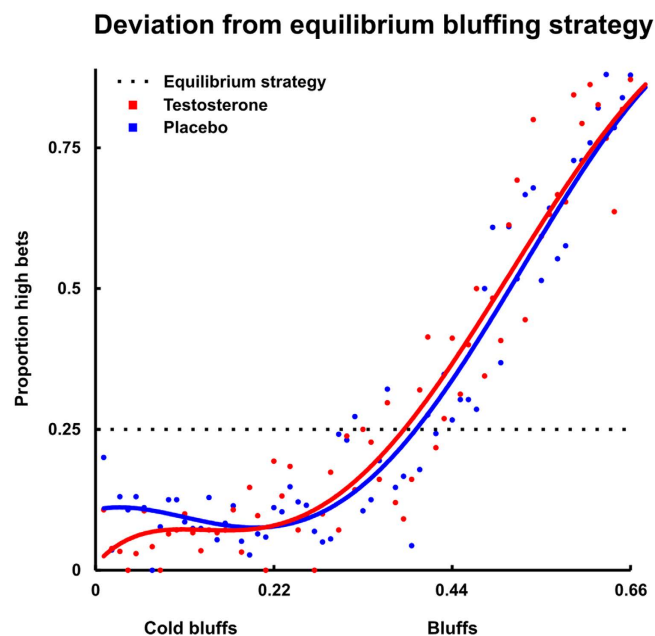

Jack van Honk, Geert-Jan Will, David Terburg, Werner Raub, Christoph Eisenegger & Vincent Buskens

*Scientific Reports* 6:18096; doi: 10.1038/srep18096; published online 04 January 2016; updated on 25 February 2016

The HTML version of this Article contains an error in the order of the Figures and their legends. Figures 3 and 4 were published as Figs 4 and 3 respectively.

The PDF version of this Article contains an error in the order of the Figure legends. Figure legends 3 and 4 were published as Figure legends 4 and 3 respectively. The Figures are correct.

The correct Figs 3 and 4 and their accompanying legends appear below as Figs 1 and 2 respectively.

**Figure 1. Visualisation of the influence of testosterone on bluffing behavior relative to the equilibrium strategy.** Testosterone specifically reduces bluffing with weak hands, i.e. ‘cold bluffing’. Polynomial fits are based on the proportion of high bets with increment-size 0.01 over the full range of poker hands (0–1).

**Figure 2.** Proportion of calls with logistic regression lines for placebo and testosterone representing their main effect in the multiple logistic regression model. Testosterone increases calling.
