Acknowledgements

First of all I am grateful to everyone who contributed directly and indirectly, knowingly and unknowingly to the realisation of the work here reported. To mention few people, I would like to thank my promotors Willem-Hendrik, Peter Burbach and Matthijs Verhage, for giving me the opportunity of participating in this research project at the “R.M.I.” and for believing that I had the capacity to succeed in this field. I hope I contributed, at least in some way, in realising some of the long-term step-by-step research goals of our institute. I am particular grateful to my “ex-co-promotor”, Matthijs, for all lessons learned. I also would like to thank Hans Geuze and Judith Klumperman for the nice discussion and guidance in the wonderful world of electron microscopy. Also thanks to Profs. A. Verkleij, R. Zeller, J. Verhagen, A. Brussaard and H. Geuze (again) for evaluating the manuscript of this thesis.

Some people were of an essential help in the Leo’s lab, in the cold- as well as in the DNA-lab, and the People from the Cell Biology Lab (UMC). I would like to thank them for the answers at my questions: Do you know where/how…? And also for the patience when later my questions started by: “Weet je waar/hoe/…?” Also, Tony Coenen for the histology tips; Anita Vermeer for the experimental, emotional and scientific support; George for the EPON, Viola for the “cryo”, Timo for “the other cryo”, hartelijk bedankt.

In another way but to the same extent, I am grateful to the “laboutsiders” who believed and gave me all kinds of support, also to put me on the right track to accomplish this research project. Eric for giving me the opportunity to start in “a collaboration with Utrecht”. Sjoerd for the “EM bespreking” and all “small” supports. Titti for all the “eye-openers”, Pilar for all the late nights and staying over, as well as Wouter/Dorien, Nikki and Matthijs. Agradeço a minha mãe por me ter deixado encontrar o meu próprio caminho. Merci beaucoup Tony, grâce à toi je suis bien, ou mal, arrivé là. Declan without you none of this would have been possible, thanks for everything.
